

The Pipeline

Live grid data flows through Eventstream and an Eventhouse, into a decision engine that powers real-time charging decisions.

Live Dashboard

Grid trend, current intensity, and live battery / charging status — all updating in real time.

Optimizer In Action

The screenshot displays the Microsoft Fabric workspace interface. The top navigation bar includes the 'Fabric' logo, a search bar, and a 'Trials activated: 15 days left' notification. The left sidebar contains icons for Home, Workspaces, Copilot, OneLake catalog, Monitor, Real-Time, Workloads, Smart EV Charger RTI, Fabric_Workspace1, and My workspace. The main area shows a data table with the following columns: Timestamp, gCO2/kWh, Battery percentage, and Status. The table data is as follows:

[2026-08-24T21:30Z]	87	gCO2/kWh (low)	Battery: 52% CHARGING
[2026-08-24T21:30Z]	87	gCO2/kWh (low)	Battery: 55% CHARGING
[2026-08-24T21:30Z]	87	gCO2/kWh (low)	Battery: 59% CHARGING
[2026-08-24T21:30Z]	87	gCO2/kWh (low)	Battery: 63% CHARGING

The bottom status bar indicates 'Running Cell 5' with 'CPU 2vCores (15.4%), RAM 16G (43.0%)' and 'AutoSave: On'. The bottom right corner shows 'Selected Cell 6 of 7 c'.

A rolling average and a simulated battery decide when to charge — cycling between CHARGING and IDLE near the 80% cap.
